Modify a pending job: qalter

How to modify a job already submitted?

Modifying resources request:

If your job has already been submitted, and it is not running yet, and you decide that you need to modify some of the submission parameters, you can use the command qalter:

```
>$ qalter ... your new requests ... JOBID
```

For example suppose that you initially submitted a job using the queue instance queue1, but later realize that queue2 would be better:

```
[testuser@login-node-1-0 ~]$ qsub -q queue1.q myjob.txt
Your job 3185289 ("myjob.txt") has been submitted

[testuser@login-node-1-0 ~]$ qalter -q queue2.q 3185289
```

As another example, consider a situation in which you have submitted 100 jobs, and some of them start running and crash because you forgot to allocate enough memory.

You realize can modify the pending jobs simply adding the memory request:

```
[testuser@login-node-1-0 ~]$ qalter -l mem_free=2G -l mem_token=2G 3185289
```

Note: In some case qalter allows you to change the parameter of a job already running. In that case (except for rare exceptions) the modification will happen only when the job is restarted or relocated.

If you need to trigger suspension and relocation of your own job, please check out the documentation of the command qmod.

Putting jobs on hold:

You can also put a pending job "on hold" in case you realize you need to complete some other task before the job starts:

```
>$ qalter -h u JOBID
```
Your job 3185678 ("test.job") has been submitted

Your job 3185678 ("test.job") has been submitted

<table>
<thead>
<tr>
<th>job-ID</th>
<th>prior</th>
<th>name</th>
<th>user</th>
<th>state</th>
<th>submit/start at</th>
<th>queue</th>
</tr>
</thead>
<tbody>
<tr>
<td>3185678</td>
<td>0.00000</td>
<td>test.job</td>
<td>testuser</td>
<td>qw</td>
<td>02/12/2015 10:44:09</td>
<td></td>
</tr>
</tbody>
</table>

To remove the hold state you can use:

```bash
>$ qalter -U JOBID
```

**NOTE:** To implement in a more organized way dependencies between jobs, please read these [instructions](#).
