| **Handset** | • The handset is a standard wideband-capable audio handset (connects through an RJ-9 port).  
• The standard coiled cord has a custom end for concealed cable routing beneath the phone (cord length is approximately 21 in. [55 cm] coiled and up to 72 in. (183 cm) extended).  
• The handset is hearing aid-compatible (HAC) and meets Federal Communications Commission (FCC) loudness requirements for the Americans with Disabilities Act (ADA). Section 508 loudness requirements can be achieved using industry-standard inline handset amplifiers such as Walker Equipment W-10 or CE-100 amplifiers. The dial pad is also ADA-compliant. | • The handset is a standard wideband-capable audio handset (connects through an RJ-9 port).

| **Speakerphone** | • A full-duplex speakerphone allows for flexibility in placing and receiving calls.  
• The full-duplex speakerphone gives you flexibility in placing and receiving calls with hands-free. For added security, the audible dual tone multifrequency (DTMF) tones are masked when the speakerphone mode is used. | • A full-duplex speakerphone gives you flexibility in placing and receiving calls with hands-free. For added security, the audible dual tone multifrequency (DTMF) tones are masked when the speakerphone mode is used. |
| **Ethernet Switch** | • The phone has a 10/100BASE-T Ethernet connection through two RJ-45 ports, one for the LAN connection and the other for connecting a downstream Ethernet device such as a PC.  
• An internal 2-port Cisco Ethernet switch allows for a direct connection to a 10/100/1000BASE-T Ethernet network (IEEE 802.3/802.3u/802.3ab) through an RJ-45 interface with single LAN connectivity for both the phone and a co-located PC.  
• The system administrator can designate separate VLANs (IEEE 802.1Q) for the PC and phone, providing improved security and reliability of voice and data traffic. | • An internal 2-port Cisco Ethernet switch allows for a direct connection to a 10/100/1000BASE-T Ethernet network (IEEE 802.3/802.3u/802.3ab) through an RJ-45 interface with single LAN connectivity for both the phone and a co-located PC.

Expanded room coverage
• 160-degrees conical pattern provides even coverage of the listening area.
• Four Hemi-Cardioid microphones are perfectly spaced so that they combine to provide a 180-degree pick-up pattern around the device. Speech is captured at the same level at all points around the Cisco Unified IP Conference Phone 8831.
• Ability to grow to fit a variety of room needs.
  • Small Office (base unit)
  • Standard Conference Room (base unit and 2 wired or wireless extension microphones)
  • Boardroom (daisy chaining two base units)
  • Large Boardroom (daisy chaining two base units and 2 wired or wireless extension microphones)

Medium to large conference rooms up to 26 people; 800 sq. ft/74.3 sq. m
• Ability to grow to fit a variety of room needs.
  • Large Boardroom: daisy-chain – 1 additional base unit (available Q1-Q2CY2018)
  • Expansion microphones: Wired, DECT Wireless* and charging stations* (*available Q1-Q2CY2018)
• Wideband (G.722), full duplex

Ability to grow to fit a variety of room needs.

*EHS (Electronic Hook Switch) cable is required to answer and end calls.

- **Cisco ATA-187 Analog Line Adapter**
  - Required for all new fax machine installations on campus
  - Two (2) voice ports for use with legacy (analog) telephones or fax machines
  - Uses SIP technology rather than Cisco proprietary SCCP
  - One-year warranty
  - $175.50 (includes license & installation, shipping may be extra)
