Available Applications

Installed on the system there are several software development tools and applications, ranging from Molecular Dynamics software to EM analysis to general purpose computing tools like Matlab and Python.

The software is installed under one of the following two locations:

/scisoft
/share/apps/scisoft

You should use the Modules as much as possible to access the applications.

To see the list of the available application use the command:

```
[testuser@login-node-1-0 ~]$ module available
```

Can you install additional software for me?

Of course!!

If you need a specific piece of software and you don’t find it installed, please let us know and we will double check if there are any licensing restrictions and install the software for you.
