Locate the Remote Desktop Connection application

- Find the app *Remote Desktop Connection* on your PC. Typically, it is filed under "Windows Accessories". Open it.
- Click *Show Options*
- Configure the connection
  - for *Computer*: enter the DNS name of your work computer
  - for *User name*:
    - if your on-campus PC authenticate to the campus Active Directory servers, I recommend setting this as `brandeis.edu\unetID` - for example, I would use `brandeis.edu\karel`
    - if your on-campus PC does not use the campus Active Directory servers, try just the username, or try `computername\username`.

Connect to the on-campus computer (whenever you need to work)

- Open a VPN connection using Pulse Secure
• Launch Remote Desktop Connection and connect as above
