Android VPN Access

Although it is unsupported by LTS and no assistance from the Help Desk should be expected, the Pulse Secure client for Android works fine with the Brandeis VPN in limited testing.

Install the client, open it, then configure a Brandeis VPN connection using these settings:

1. Connection Name: choose something meaningful
2. URL: https://wormhole.brandeis.edu
3. Username: your Brandeis username
4. Authentication Type: Password

Once a connection is configured, click Connect to open it. Following authentication, consent to trusting Pulse Secure to intercept all network traffic. A key will appear in the Android menu bar to indicate that a VPN session is active. Now you're ready to connect to a Brandeis service that is restricted to on-campus use.
