### Locate the Remote Desktop Connection application

- Find the app *Remote Desktop Connection* on your PC. Typically, it is filed under "Windows Accessories". Open it.
- Click *Show Options*
- Configure the connection
  - for **Computer**: enter the DNS name of your work computer
  - for **User name**:
    - if your on-campus PC authenticate to the campus Active Directory servers, I recommend setting this as `brandeis.edu\unetID` - for example, `brandeis.edu\karel`
    - if your on-campus PC does not use the campus Active Directory servers, try just the username, or try `computername\username`

### Connect to the on-campus computer (whenever you need to work)

- Open a VPN connection using Pulse Secure

---

**What you need to know before you start**

1. You need to know the name of your on-campus PC
2. You need to have enabled Remote Access on the PC and set the firewall
3. You need to make sure your computer at work is **powered on**
- Launch Remote Desktop Connection and connect as above
